No.C.VII.1/2015-ITW(QRs)-(5) \ भारत सरकार/Government of India

## गृह मंत्रालय/Ministry of Home Affairs

## पुलिस आधुनिकीकरण प्रभाग /Police Modernization Division संभरण-। डेस्क /Prov.। Desk

Jaisalmer House, 26 Man Singh Road, New Delhi, dated the July, 2015

To,

The DsG: AR, BSF, CISF, CRPF, ITBP, SSB, NSG & BPR&D.

Subject: QRs and Trial Directives of IP Encryptor.

Sir,

The undersigned is directed to refer to the subject mentioned above and to say that the QRs and Trial Directives in respect of IP Encryptor as per Annex-I and Annex-II, respectively have been approved by the competent authority in MHA.

- 2. Henceforth, all the CAPFs should trial evaluate and procure the above item, required by them, strictly as per the laid down QRs.
- 3. Concerned CAPF will be accountable for correctness of the QRs and Trial Directives of IP Encryptor.

Yours faithfuily.

M.N. SUKOLE (M. K. Chahar)

Under Secretary to the Govt. of India

Encl: As above.

Copy forwarded for necessary action to:

O (IT), MHA - with the request to host the QRs and Trial Directives of IP Encryptor on official website of MHA (under the page of Organizational Set up, Police Modernization Division-Communication Equipments).

Copy to: DDG (Procurement), MHA

APPX-IT

## **QR/Technical Specification: IP ENCRYPTOR**

1	Specification  General  Environmental	Qualitative Requirements (QR): Internet Profocol IP Encryptor may be used in to following mode						
	Noticed Assess	a) Transport Mode b) Tunnel Mode	<del></del>					
2.	Network Access	Should be compatible with channels of 8 Mbps using M Protocol Level Switching (MPLS). Very Small Apert Terminal (VSAT). Leased line and Worldwinteroperability for Microwave Access (WiMAX).	ture					
3.	Connectivity :	<ul> <li>(a) Support Internal Protocol version-4 (IPV4) version migrating capability for Internet Protocol version (IPV6).</li> </ul>						
		(b) No. of Local Area Network (LAN) ports - one						
		(c) No of Wide Area Network (WAN) ports one or mo	ore.					
		(d: Full Duplex						
		(e) <u>Electrical</u>						
		<ul><li>(i) Min input levels-10/100 standard Ethernet le i.e. 10 &amp; 100 Mbps</li></ul>	e⊅e¹					
		<ul><li>(ii) Output levels-10/100 standard Ethernet le i.e. 10 &amp; 100 Mbps.</li></ul>	evel					
		(iii) Pulse shape (input & output) 10/100 stand. Ethernet interface (e. 10 & 100 Mb international standards to support 10 & 1 Mbps interfaces) (iv) Bit Error Rate (BER) rating- 1/1000000 or 1 (1 bit in 10 bits) or better	20d 100					
4	Encryption	The Internet Protocol (IP) Encryptor hardware and software will be indigenously developed and the product to meet statutory security requirements. It is required to be approved by the Scientific Analysis Group (SAG). Govt of India In order to do so, the following must be meet:-						
		<ul><li>(a) Key length – To meet the G4 grade requirement specified by SAG.</li></ul>	as					
		(b) Key loading – Through Fill Gun and Key Pad.						
		(c) Key storing – As per SAG specification.						
		(d) Algorithm – To meet the G4 grade as specified SAG.	by					
		<ul> <li>(e) Algorithm loading – Field Programmable Gate Arra (FPGA) based as per SAG requirement.</li> </ul>	łys					
		<ul> <li>if) Algorithm storing – Pre-caded in system as per SA specification.</li> </ul>	AG					
		ig: Encryptor Hardware – Tamcer Proof.						

	Management	Mus	t have following management features -
			LAN interface for Encryptor management.  Visital indications of status.  Unange of key and arguminm from central location after system is decroyed lie the LAN/WAN.  Local loading of key using key pad and filt-gun.
		(e)	Built in test Facility (BITE)
	· · · · · · · · · · · · · · · · · · ·	(f)	Non-volatile storage for key and algorithms to ensure that algorithm and key loading is not required even in case of failure of power (primary and secondary)
6.	Power	(a)	Must work on a/c mains with the following:  (i) Frequency – 50 Hz ± 5Hz  (ii) Voltage – 220 VAC ± 40V,
·		(b)	In line batteries arrangement to provide surge protection is desirable
7.	Physical & Environmental	(a) (b) (c)	Mountable in 19" racks.  Work in non-ac environment at Temp from 0 – 50° C.  Environment specs humidity 90% at 50° C.
8.	Safety and destruction	(a) (b) (c) (d)	Unit must be securable to the rack with key loading arrangement. Unit should not be openable unless removed from rack Arrangements for emergency erasure of keys. Arrangement for destruction of classified hardware.

## TRIAL DIRECTIVE OF IP ENCRYPTOR

of Version Repoller/Manufacturer. In case of any discrepancies/problem, the vendor/rep of firm will demonstrate the features to the Board of officer of the 14.11.11 st parameters/specifications mentioned in QRs will be checked by the Eoard of Officers by ascertaining/verifying following checks in the presence The further, if proper testing instrument for testing these parameters, is not available with user, same will be arranged by the vendor

Physical Checks. In this category, specifications of the equipment will be checked physically as per QR

Functional Checks. The vendors will show all the features/configuration of the equipment functioning on ground to the board of other east oursig trial.

Submission of Certificates Specification which cannot be checked due to lack of testing facilities/expertise, self-certificate of OEM and to

1120

Support Internal Protoco version 4 (IPV4) with		Interoperability for Microwave Access (WiMAX).	inal (VSAT) Leased line and Worldwide	Should be compatible with chare els of 8 Mbps using Multi	Tunnel Mode		following made:	used in the	Qualitative Requirements (QR)	during trial.
				vendor/ replortim will demonstrate the redutes to the Board of Officer.	Further, in case of any discrepancy, problem the	migrating capability for heavest Protocol version-6 functional test of the provided specifications of states (IPV6).	with The Board will carry out physical chesh as well as the	problem, the vendor/ rep of firm will comcostrate the features to the Board of Officer.	submitted by vendor. In case of any de dispancy	Protocol Level Switching (MPC5). Very Small Aperture functional test of the mentioned parameter was the Terminal (VSAT) Leased line and VVorldwide Board will check the OEM compliance certificate	Multi-The Board will carry out physical cheel as well as it	demonstrate the features to the Board of Officer	Idiscrepancy/problem, the vendor/ rup or lam with	functional test of the two modes in the or have	the The Board will carry out physical check as well as the	Trial Directive	

(iii) Pulse shape (input & output) 10/100 standard The Board will carry out physical check as well as the Ethernet interface i.e. 1i) & 100 Mbps functional test of the provided specifications and also. Mbps interfaces) (International standards to support 10 & 100 check the OEM certification provided by vendor Furthern in case of any discrepancy/ problem, the vendor/ report

Bit Error Rate (BER) rating- 1/1000000 or

software will be indigenously developed and the product|functional test of the mentioned parameters. Also, the be approved by the Scientific Analysis Group (SAG),|submitted by vendor. In case of any discrepancy/ to meet statutory security requirements. It is required to∫board, will, check, the IOEM, compliance, seraficate The Internet Protocol (IP) Encryptor hardware and The Board will carry out physical check as well as the 10° (1 bit in 10 bits) or better

Govt of India. In order to do so, the following must be problem, the vendor/ rep of firm will demonstrate the features to the Board of Officer.

specified by SAG. Key loading - Through Fill Gun and Key Pad

9 0 Key storing - As per SAG specification

<u>a</u> Algorithm - To meet the the grade as specified by

(e) Algorithm loading - Field Programmable Gate Arrays (FPGA) based as per 3543 requirement.

Algorithm storing - Preloaded in system as per SAG specification

(g)Encryptor Hardware — Tan per Proof

Key Requirement - As per requirement specified by

firm will demonstrate the features to the Roard of Officer

Key length - To meet the GH grade requirement as The vendor/firm will submit SAG approved recall cate.

7
-

)Must have following management features:-

- (a) LAN interface for Encryptor management
- (g) Visual indications of status
- <u>(C</u> Change of key and algorithm from central location the Board of officer, after system is deployed i.e. the LAN/WAN.
- (d) Local loading of key using key pad and fill-gun
- (e) Built in test Facility (BITE)
- and secondary)
- (a) Must work on a/c mains with It e following
- Frequency -- 50 Hz > 5HZ
- Ē Voltage - 220VAC 70F
- **(F)** protection is desirable In line batteries arrangement to provide surge
- (E) Mountable in 19" racks

www.at % Environmental

- 9
- (C) Environment specs humidity 90% at 50° C

kThe Board will carry out physical check as well as the Built in Test facility (BITE) and loading of Fey. The functional test of the component Le visual audications. vendor/rep of firm will also demonstrate the reatures to

ensure that algorithm and key loading is not functional test of the component of which indications Non-volatile storage for have and algorithms to The Board will carry out physical chemic actively as the required even in case of talture of power (primary Built in Test facility (BITE) and loading of key. The vendor/rep of firm will also demonstrate the features to the Board of officer

produce certificate of OEM. Board is needeclared mentioned power sources and the vancou will also The Board will carry out physical chack by using the certificate of OEM or Test certificate from our Government approved laboratory

Work in non-ac environment at Temp from 0 - 50° the board will check the OEM compliance certificates The Board will carry out physical check of Licks. Also OEM or test certificate from any Covernment approve

(a) Unit must be securable to the rack with key loading The Board will carry out physical check and functional

test of the mentioned parameters. In case of any

(<del>d</del>) Unit should not be openable unless removed from demonstrate the features to the Board of officer
